

Research support for hospitals and institutions.

One project or a program across departments. Original research from available hospital data, institution-selected reviews, and fully documented case reports.

Your clinical question.
An agreed research plan.
Documented outputs.

HOSPITALS + UNIVERSITIES

From a research question
to documented work.

- 01 Question + permissions
- 02 Methods + analysis
- 03 Tables + manuscript

Scope and responsibilities agreed before work begins.

Institutional research agreements

Coordinate several departments through one program, with distinct research questions, article-level scopes, and a staged delivery plan.

Analysis and interpretation

An agreed analysis plan, quality checks, reproducible files, tables, figures, and interpretation within the defined scope.

Manuscript and submission support

Collaborative manuscript development, journal fit assessment, submission preparation, and peer-review responses.

Begin with a non-confidential summary. Settle permissions, ethics documentation, and data-access arrangements before any dataset is transferred.

Discuss an institutional project

Evidence services for pharma and biotech.

Support for medical affairs and research teams, with defined methods, reviewed outputs, and clear responsibilities.

Evidence synthesis.
Real-world data analysis.
Scientific communication.

PHARMA + BIOTECH

Evidence your team
can examine and use.

- 01 Define the question
- 02 Review the evidence
- 03 Communicate findings

Evidence synthesis. Biostatistics. Scientific communication.

Evidence synthesis and biostatistics

Literature reviews, systematic reviews, meta-analyses, study design, analysis plans, and analysis of suitable observational, registry, or claims data.

Medical writing and scientific communication

Manuscripts, abstracts, posters, plain-language summaries, slide decks, and training materials. Writing support is disclosed.

Additional scoped support

Safety literature screening outputs for the client's pharmacovigilance workflow, evidence-gap assessment, and methodology advice.

Scope, fees, responsibilities, and delivery milestones are agreed before work begins. Journal acceptance is determined by editors and peer reviewers.
